Salon Space Example

***for a space that is 106” wide and 32” tall**

- Each rail is 39.4”. Wall space 106”. Leave 3” on either side to be able to slide the racks on = 3 rails
 - In this example they will need to cut one rail down to total 100” (advised to do professionally so that it doesn’t have a rough edge).
It may not be necessary for a different salon space to have a rail cut to size
- Each module is 2.54” wide = 2.54×12 (number of pieces in case) = 30.48”
- 100” across divided by 30.48 = 91.74, which leaves space for an additional 3 pieces (2.54” each piece) to add to each row
- Each row should hold 38 colors across on a 100-inch rail

- Height of area 32”, each tray is 7.25” high, allowing for 4 rows high
- Using the connecting points on the top and bottom of each module, slide modules together to create multiple rows. No additional rails are needed

- 4 rows holding 38 different colors across would equal a total of 152 different colors
